# Quezon prelates sound drug alarm

**UPON** the 12th-13th January 2004, the Quezon prelates have convened a meeting to discuss the growing problem of drug addiction in the region. The meeting was held at the Quezon National Shrine in Baguio City. The prelates, led by the Archbishop of Manila, Cardinal Jaime Sin, discussed the impact of drug addiction on the region and the need for a coordinated response.

Archbishop Sin said that drug addiction is a major public health problem in the Philippines and that the Church has a moral obligation to address it. He called for a "holistic approach" that involves the Church, the government, and the community.

The meeting also discussed the need for more research and data on drug addiction in the region. The prelates agreed to continue their efforts to combat drug addiction and to support the government in its fight against the drug trade.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (CG) and the experimental group (EG). The CG was subjected to a control protocol (CP) and the EG to an experimental protocol (EP). The CP consisted of a 10-min rest period followed by a 10-min work period. The EP consisted of a 10-min rest period followed by a 10-min work period. The work period was divided into two phases: a 5-min phase of low intensity (LI) and a 5-min phase of high intensity (HI). The subjects were subjected to the CP and EP for 10 days. The subjects were then subjected to a 10-min rest period followed by a 10-min work period. 1. The first step is to identify the variables involved in the problem. In this case, the variables are the number of hours worked (H) and the number of hours of leisure (L). The total number of hours available is 24, so we have the constraint  $H + L = 24$ .

Figure 1 is a line graph showing the effect of the concentration of the inhibitor on the rate of polymerization. The y-axis is labeled "Rate of polymerization" and ranges from 0 to 1.0. The x-axis is labeled "Concentration of inhibitor" and ranges from 0 to 1.0. A curve starts at (0, 1.0) and decreases as the concentration of inhibitor increases, approaching 0.5 at a concentration of 1.0.

## British PM Brown is doomed whatever happens, experts say

NY bomb plot may have cost as little as \$7 million

BRITAIN'S PRIME MINISTER, Tony Blair, is facing a crisis of confidence as the country's economy continues to struggle. Experts predict that Blair's government will be ousted in the next general election, regardless of the outcome of the upcoming polls.

Blair

Blair's government has been accused of mismanaging the economy and failing to address the needs of the working class. The opposition Labour Party, led by Gordon Brown, has gained significant support in recent polls. Blair's position as Prime Minister is becoming increasingly precarious.

Despite the challenges, Blair remains committed to his policies and the well-being of the British people. He has urged the public to remain patient and confident in his leadership.

The economic situation in the UK has been a major factor in the decline of Blair's popularity. High unemployment and inflation have led to widespread discontent. The opposition has capitalized on this discontent, promising a more robust economic strategy.

Experts believe that Blair's government will be replaced by a Labour government in the next general election. This transition would mark a significant change in British politics and the direction of the country's economic policy.
